

In Lak'ech

A human-guided system for brand-aligned AI content.

THE PROBLEM

Identity is fragile in the age of fluent machines.

*Fluency is not
the same as
identity.*

Generic AI tools are now very good at producing human-sounding text,
but often very poor at preserving the voice, symbolism, and emotional continuity that make a brand recognisable.

WHAT GETS LOST?

Default AI prompts optimise for plausibility, and not point of view.

- | | | |
|----|--------------------------|--|
| 01 | Consistent tone | The brand sound like the brand everytime |
| 02 | Cultural texture | The references, style, and personality that makes the brand feel part of a community |
| 03 | Symbolic language | Words, ideas and themes that carry meaning |
| 04 | A point of view | A clear, unique perspective on the world |

THE HYPOTHESIS

If brand knowledge is structured with care,
then AI can become brand-aligned.

*more emotionally specific, less generic,
guided by people rather than replacing them.*

— A support layer — not a substitute for judgment.

DEVELOPMENT

Incremental. Specification-led. Reviewed.

- 01** Kanban-paced
 - One subsystem at a time, validated before moving on.
- 02** Spec as source of truth
 - Every request anchored to PROJECT_REQUIREMENTS.md.
- 03** Tests first, then live
 - Unit tests per subsystem; live smoke tests to prove it.
- 04** Scope as discipline
 - Out-of-scope ideas deliberately excluded, repeatedly.

A structured text-generation system for brand content.

INPUTS

Tone · Platform · CTA

Objective · Audience

Example content

Word count · Instructions

The system loads brand material, organises that knowledge, prepares a prompt for the selected content type, sends it to the model, and returns a result — handed to a human for review.

FOUR OUTPUTS

What the MVP generates.

01

SM Copy

Caption text

02

Launch Copy

Longform
announcement

03

Product Copy

Descriptions

04

Creative Ideas

Short, structured
concept suggestions

DELIBERATELY EXCLUDED

What this MVP is not.

Scope was protected as carefully as the architecture. Restraint is part of the design.

- Autonomous workflows
- Memory systems
- Vector search
- Automatic publishing
- Agents
- Embeddings
- Complex UI

keep it simple,
stupid.

SYSTEM FLOW

MVP Architecture

A modular, linear workflow.

LIVE SMOKE TEST & MOCK LLM TESTS

End-to-end generation, four formats.

The brand knowledge base had a visible effect on tone and framing.

Restrained, symbolic language. Quiet calls to action. A considered, repeat-wear voice across every output.

RUN STATUS

Product description	● <i>awaiting_review</i>
Creative / design ideas	● <i>awaiting_review</i>

UNIQUENESS COMPARISON

Brand context, side by side with default AI.

BRAND-ALIGNED

I started Alakshya because I wanted to build a creative space that felt quieter than the internet, but more alive than noise. A space for people who still care about film grain, musical atmosphere, symbolic language, psychological depth, scientific curiosity, altered states, and the strange beauty of independent thought. People who sense that creativity is not just content production, but a way of seeing. A way of staying human.

This is not a brand built to speak the loudest. It is built to last longer in the mind.

This is not a brand built to speak the loudest. It is built to last longer in the mind

Over time, Alakshya will become a home for stories, visual essays, reflections, and creative work that sits somewhere between the cinematic and the intimate. It will explore the texture of being alive in a world that often flattens experience. It will make room for ambiguity, for beauty, for intelligence, for wonder without spectacle.

GENERIC

Alakshya began with a simple feeling: that too much of modern culture asks people to become easily readable.

Everything is immediate. Categorized. Explained before it can be experienced. Identity flattened into algorithms, trends, and performance. The result is a world saturated with noise, yet strangely absent of meaning.

Alakshya exists somewhere outside of that.

Minimalism, here, is not emptiness. It is restraint. An understanding that what is omitted matters as much as what remains.

Some things do not need announcing to exist.

Some things are meant to be recognised slowly.

04 — EVIDENCE

System Reliability Testing

End-to-end testing of the complete workflow architecture

100

AUTOMATED RUNS

✓	Success Rate	100%
✓	Passed	100
✗	Failed	0
🤖	API Calls	0
€	Cost	€0.00

WORKFLOW COVERAGE

EVIDENCE SCOPE

- ✓ Knowledge Base Loading
- ✓ Knowledge Base Parsing
- ✓ Prompt Assembly
- ✓ Workflow Orchestration
- ✓ Human Review Handoff
- ✓ Output Routing
- ✓ End-to-End Architecture

KEY RESULT

Every workflow completed successfully across **100** automated executions using a **mocked LLM**, validating the architecture without incurring API costs.

HUMAN-GUIDED
BRAND-ALIGNED
AI CONTENT

THE ROAD AHEAD

Future Possibilities.

Built on a strong foundation. Designed to grow.

01

Knowledge Intelligence

Intelligent weighting of primary vs secondary sources. Tagging, categories and confidence scoring for smarter brand memory.

02

Guided Onboarding

Step-by-step brand setup wizard. Faster onboarding with templates, examples and best-practice guidance.

03

Direct Publishing

One-click publishing to social platforms, CMS and email tools. From idea to live content — seamless.

04

Expanded Content Types

Blogs, emails, case studies, ad copy, YouTube scripts and more. One engine, every format.

05

Multimodal Generation

Generate images, campaign concepts and video ideas alongside text. Complete creative packs.

06

Analytics & Feedback Loops

Track performance, capture feedback and refine outputs over time. Continuously improving brand alignment.

The vision: Your AI partner for brand-consistent content — smarter, faster, and always on-brand.

FINAL REFLECTION

Brand identity needs structure. Human judgment remains essential.

AI-generated brand content can be meaningfully shaped by structured knowledge, clear workflow design, and human review. The output is not just a function of the model — it is a function of the context, constraints, and process around it.

There is a beautiful Mayan greeting, In Lak'ech Ala K'in, which means:

“I am you, and you are me.”

Specifically, In Lak'ech translates to:

That idea became a quiet guiding principle for this project. In a world filled with increasingly generic automated content, we didn't want to build an AI that replaces a brand's voice. The goal was something more modest: a system that helps reflect and support it through context, structure, and human guidance.

"I am the other you."
